

**Revenue Protection insurance protects against loss of revenue due to production loss, price decline or increase, or a combination of these factors.**

Revenue Protection (RP) is a comprehensive crop insurance plan that offers financial protection in multiple scenarios.

### **Key Features of Revenue Protection**

- **Protection Scope:** Covers revenue losses from:
  - Production losses
  - Price declines
  - Price increases
  - Any combination of these factors
- **Harvest Price Component:** Includes upside harvest price protection, meaning if the harvest price exceeds the projected price during a production loss, your policy protection increases.
- **Revenue Protection Guarantee:** Calculated by multiplying your production guarantee (per acre) by the greater of the projected price or the harvest price.

**Yield Protection is an insurance plan that only protects against production losses, not price fluctuations**

Yield Protection (YP) is a specific type of crop insurance plan with the following key characteristics:

- **Protection scope:** It only provides protection against production losses
- **Guarantee calculation:** The yield protection guarantee per acre is determined by multiplying the production guarantee by the projected price

Unlike Revenue Protection plans, Yield Protection does not protect against price fluctuations - it only covers production shortfalls.
